

## The problem

How to add on lyrics feature on the music player screen?

## Target audience

Targeted audience for the app is young adults who use iPhones, aged 16 to 21.

## Previous design

Current design as it stands today

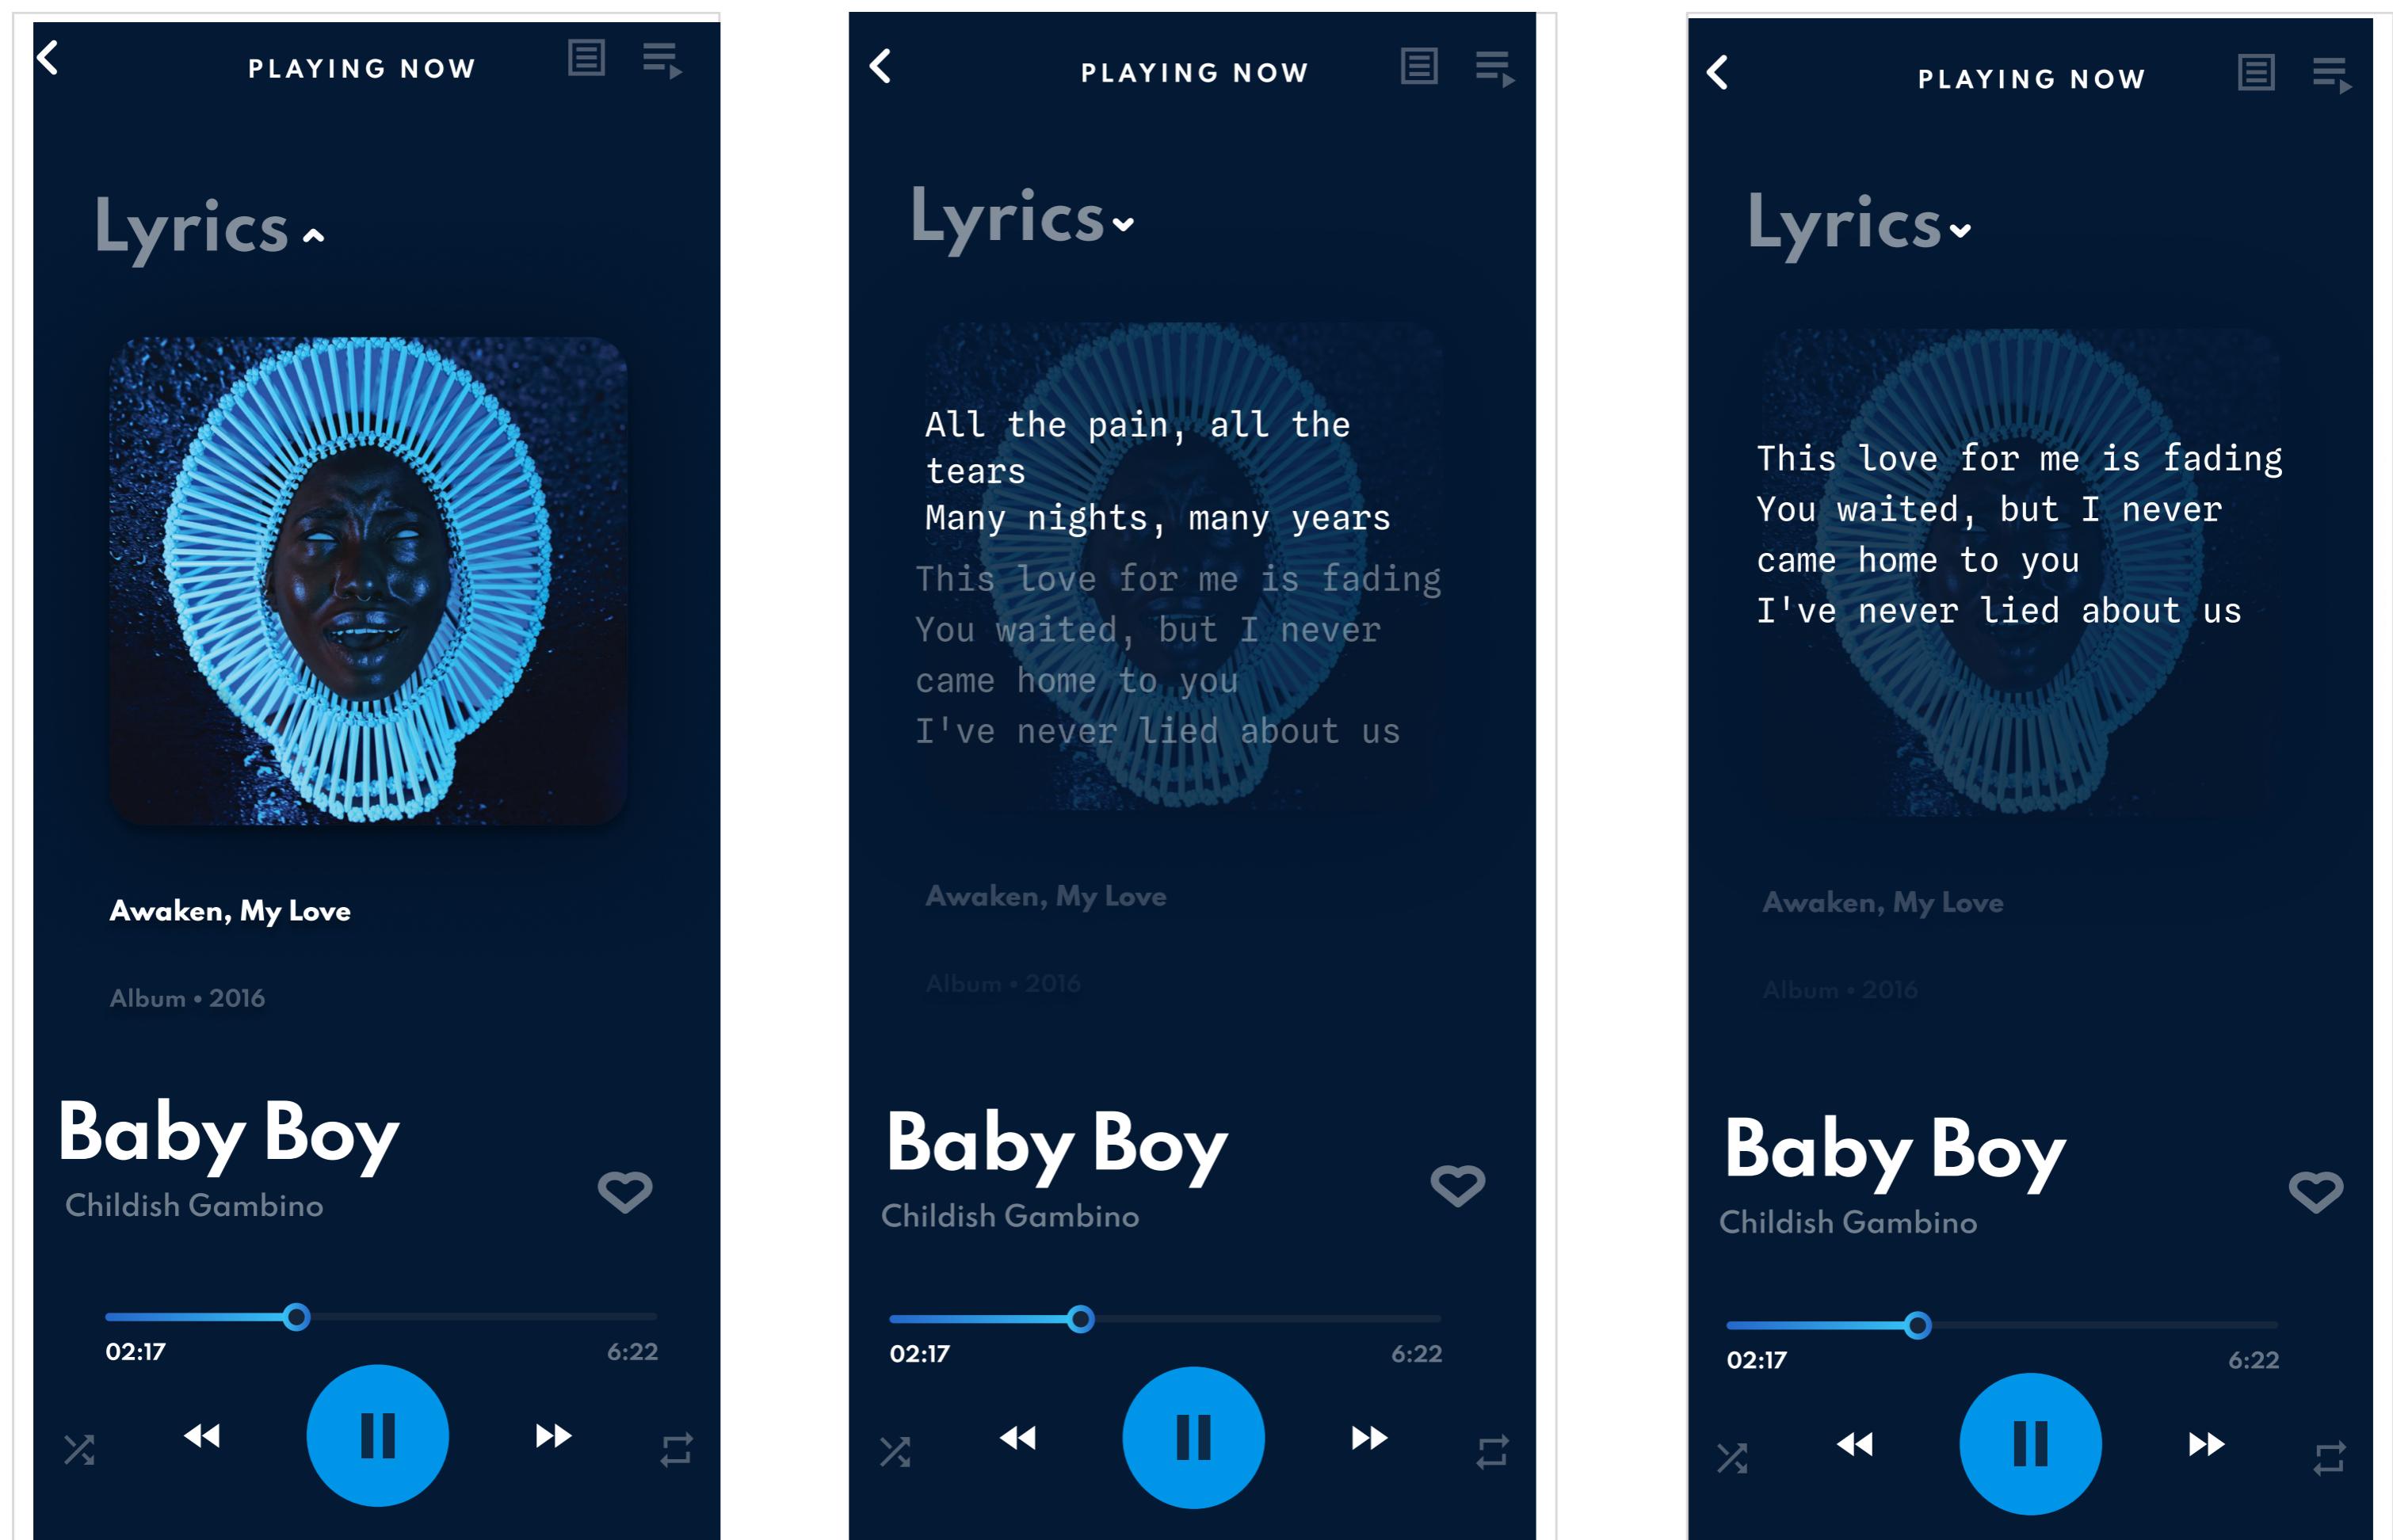

## My process

---

I have researched on lot of platforms to reach out making the lyrics feature more user friendly and inspired. I listed user needs for the feature. And prime one was convenience. I thought just by introducing an icon can make the design better and convenient. Also adding lyrics feature which helps user for viewing lyrics of their favorite musics.

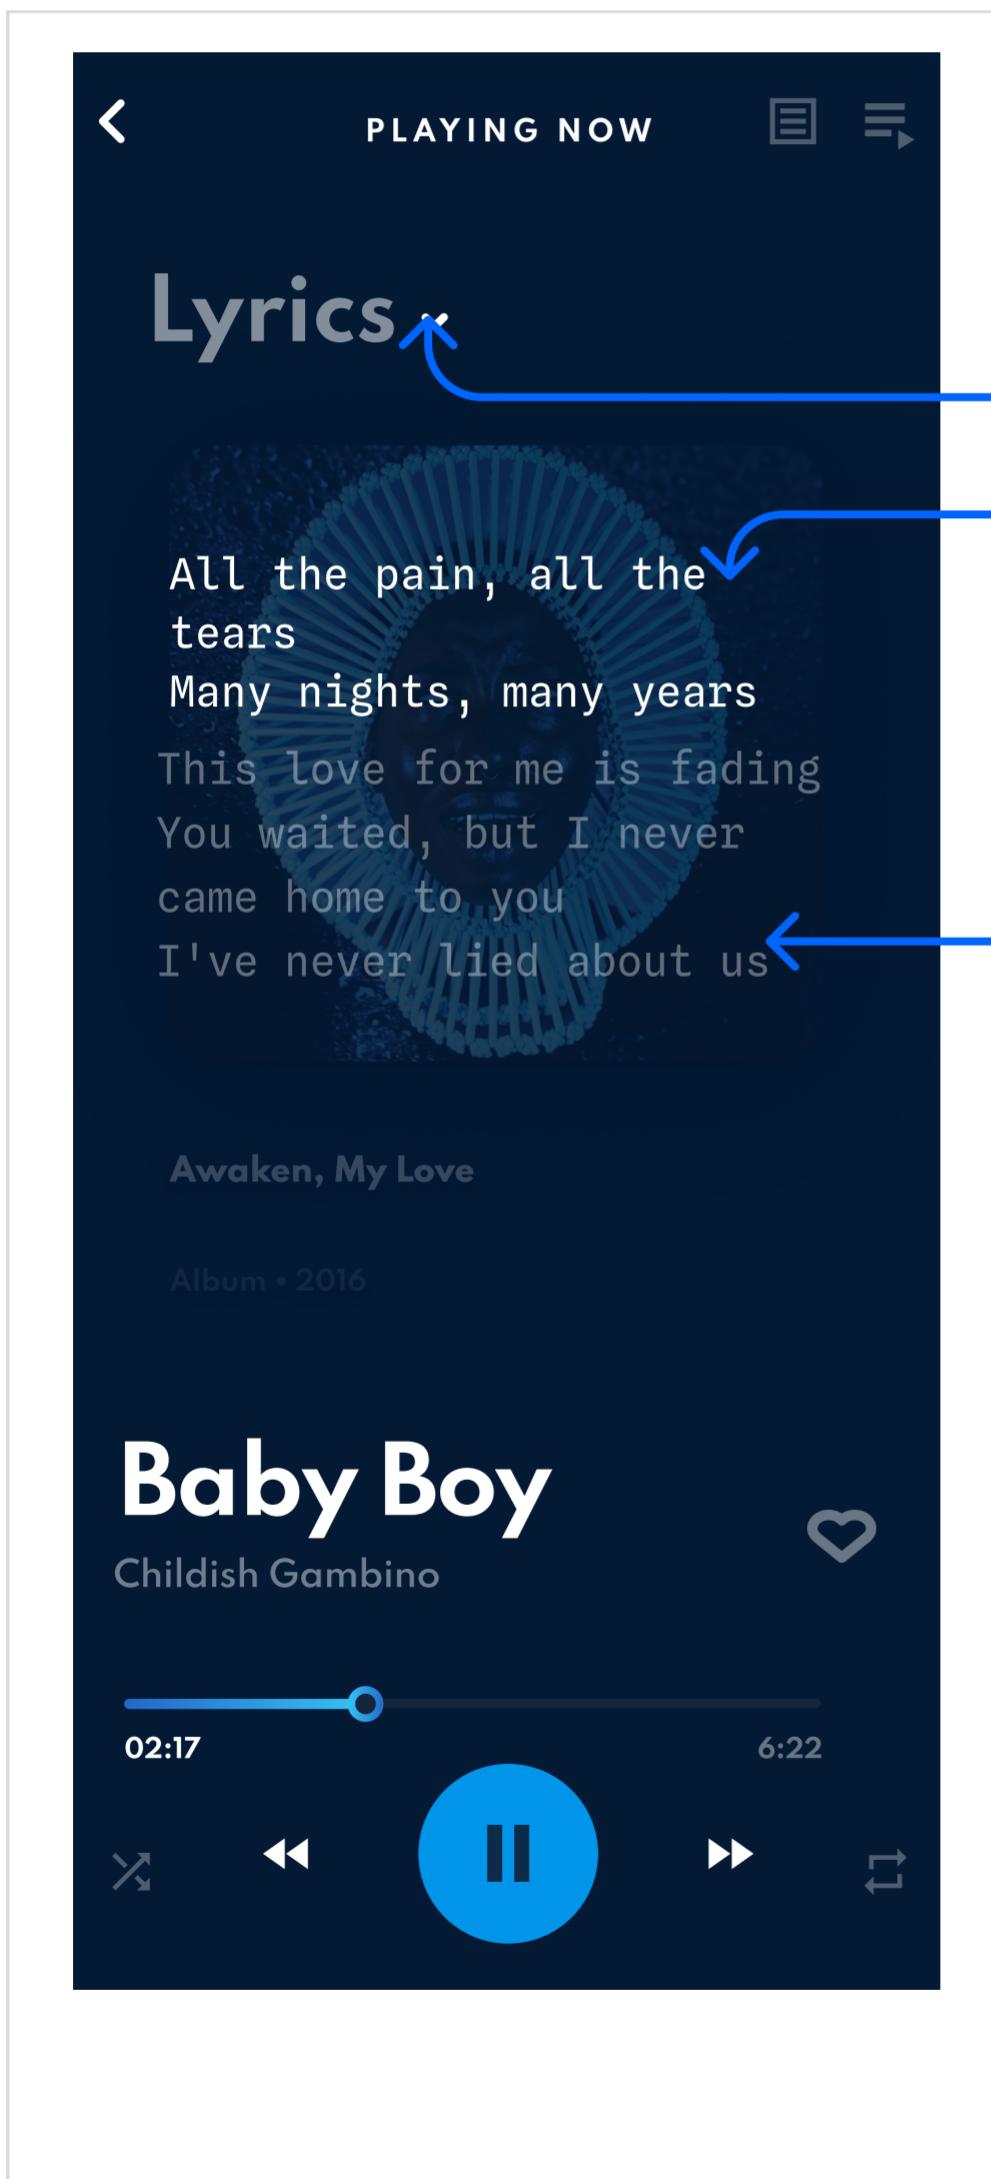

After sometime I thought of the expand and shrink feature according to users needs. This could make the listening experience more efficient and convenient.

As the lyrics option can only be expand while clicking it will shrink on the next click. Currently playing lyrics will only be highlighted which will make users easy to notice the lines.

## Recommended design

This is the new recommended design based on my explorations.

The text "lyrics" can get user attention and icon can be easily used by users expand and shrink again while user click it.

This highlighted text helps the users to see current playing lyrics.

This text is overlaid to pay more attention to the playing lyrics. As they may highlighted as the song plays.
